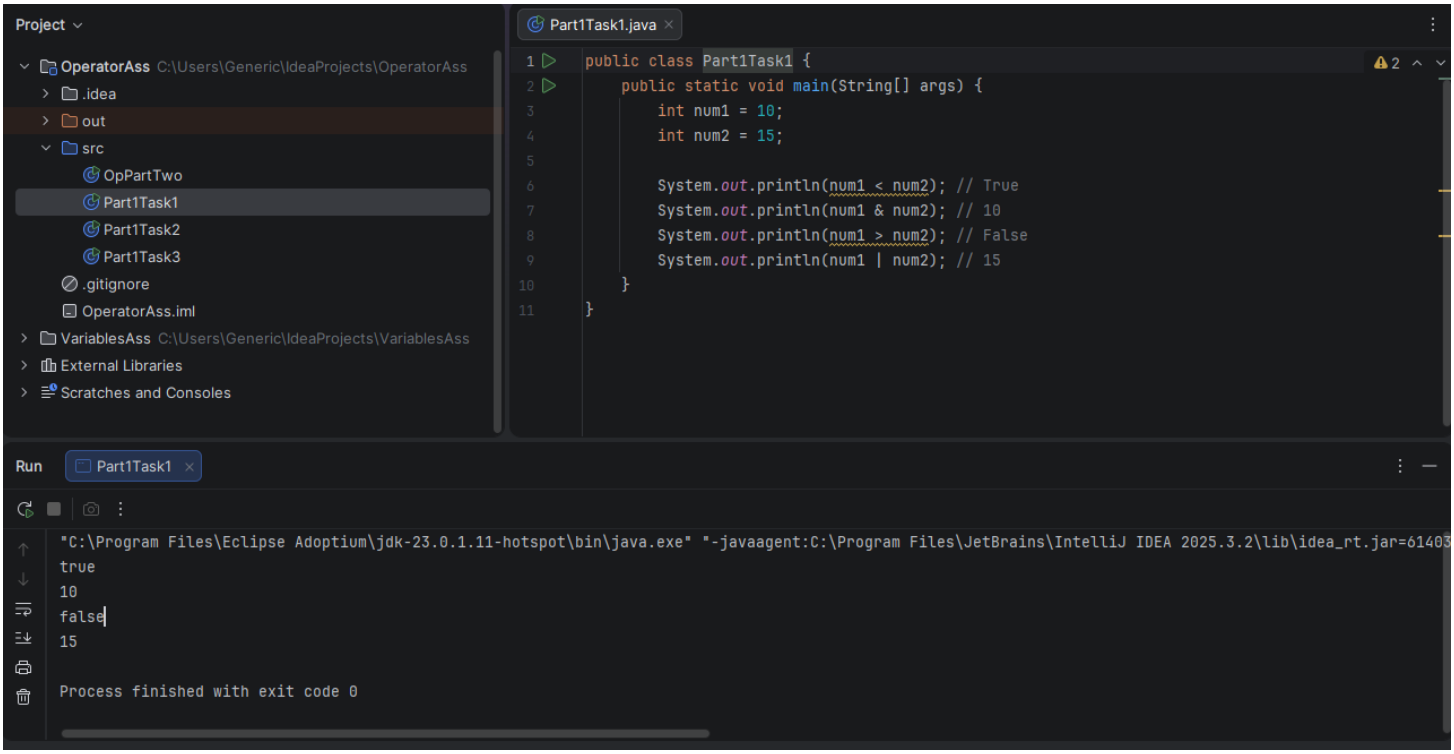
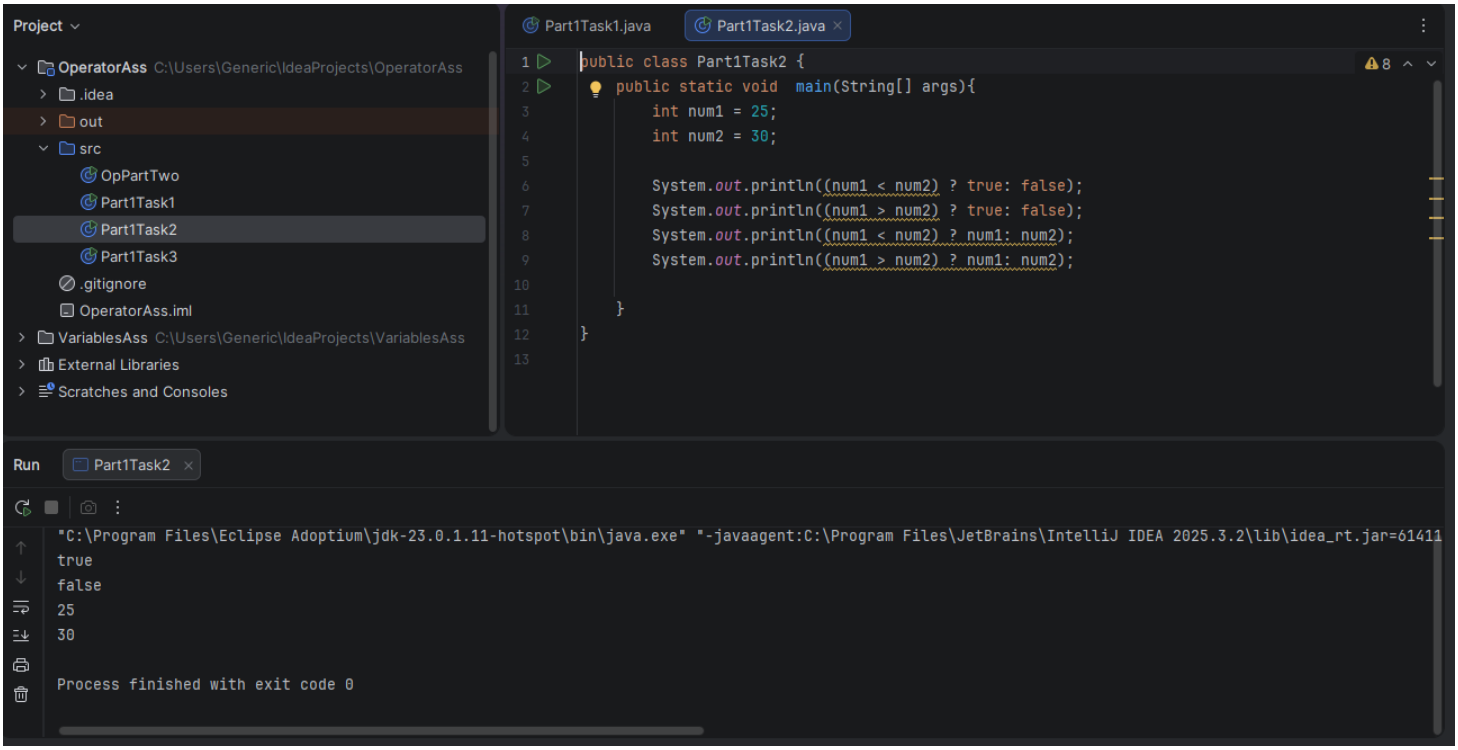
Object Oriented Programming
Midterm Activity #2: Operators

PART 1

1. Create a Java program using bitwise operators that will produce the output: true, 10, false, 15



2. Create a Java program using the ternary operator that will produce the output: true, false, 25, 30.



Name: Gianmarlo Adrian S. Abril ***Object Oriented Programming***
BSIT 2-1N ***Midterm Activity #2: Operators***

3. Create a Java program using assignment operators that will produce the output: Addition: 120, Subtraction: 70, Multiplication: 144, Division: 16.

Object Oriented Programming
Midterm Activity #2: Operators

PART 2

Program Requirements:

1. Use at least five (5) different operators from the following categories:
   - Arithmetic operators (+, -, *, /, %)
   - Relational operators (>, <, >=, <=, ==, !=)
   - Logical operators (&&, ||, !)
   - Unary operators (++, --)
   - Assignment operators (+=, -=, *=, /=)
   - Bitwise operators (&, |, ^, <<, >>)
2. The program must produce exactly six (6) outputs only.
3. At least one output must include a tricky increment or decrement case, such as:
   - a++ + ++a
   - --b + b++
   - or any similar expression that modifies the variable within the same statement.
4. Do NOT reuse:
   - Any variable values
   - Any variable names
   - Any logic patterns from Part I.
5. The output must contain:
   - At least two (2) boolean results
   - At least four (4) numeric results

Part 2

Object Oriented Programming
Midterm Activity #2: Operators

```java
        // Bitwise and Arithmetic Operators
        int value8 = 43;
        int value9 = 23;
        int bitChange = value8 << 5;
        int divider = bitChange / value9;
        System.out.println(divider);

        // Bitwise and Arithmetic Operators
        int value10 = 32;
        int value11 = 144;
        int bitOr = (value11 - value10) | value10;
        System.out.println(bitOr);

    }
}
```
